

BalticServers answers to clients questions

How do I know how much bandwidth do I need?

We will not overcharge you until your bandwidth will overreach more than 10% of your limit. For example: If you buy server for €120/month your bandwidth will be 24TB/month/server and will not be charged until your additional bandwidth price reaches more than €12. You don't need to be worried about unexpected expenses. Your personal manager will do the monitoring and will inform you about reached bandwidth limit in advance. Don't hesitate to contact your personal manager and tell him about your future plans. He will kindly help you to plan your expenses according to your expected amount of bandwidth. We are always here to find the most appropriate solution for your business.
